

## ABSTRACT

The present invention provides a composition, which includes:  
at least one volatile hydrocarbon-based solvent;  
at least one non-volatile silicone compound which is soluble or dispersible in the  
5 volatile hydrocarbon-based solvent; and  
at least one non-volatile hydrocarbon-based oil which is soluble in the volatile  
hydrocarbon-based solvent and incompatible with the non-volatile silicone compound;  
wherein the non-volatile hydrocarbon-based oil has solubility parameters satisfying  
the relationships,  $16.40 \text{ (J/cm}^3)^{\frac{1}{2}} \leq \delta_D \leq 19.00 \text{ (J/cm}^3)^{\frac{1}{2}}$  and  $2.00 \text{ (J/cm}^3)^{\frac{1}{2}} \leq \delta_a \leq 9.08 \text{ (J/cm}^3)^{\frac{1}{2}}$ . Other embodiments of the present invention provides methods of making and  
10 using the above-noted composition, as well as compositions that include the above-noted  
composition. By the present invention, it is possible to obtain a glossy deposit having very  
good staying power, which undergoes little or no transfer, does not migrate and is water-  
resistant, while at the same time being very pleasant to apply and to wear throughout the day.
